PROFESSIONAL SUMMARY

- Motivated third-year Information Systems Engineering student specializing in Data Security at Humber Polytechnic with hands-on experience in cloud computing, embedded systems, Linux administration, networking, cybersecurity, and IoT development.
- Strong background in designing, testing, and troubleshooting hardware-software systems through academic, research, and industry projects.

EDUCATION

Bachelor's of Engineering: Information Systems

Sept. 2024 - Present

Humber Polytechnic, Toronto, ON

Relevant courses: Embedded Systems, Electronic Circuits, Digital Systems, Cloud Computing, Cybersecurity Fundamentals

ACADEMIC PROJECTS

FAST - GACI Project

- Implemented application features using Next.js, TypeScript, and Git version control.
- Resolved backend and frontend issues through systematic debugging and testing.
- Worked with Linux servers, SSH, VPN connectivity, Oracle Linux, and GitHub pull requests.
- Automated generation of program-level analytical reports.

Intelligent Tic-Tac-Toe AI

- Built an AI-powered game using Raspberry Pi, Python, Flask, and SQLite.
- Secured application data using SHA-256 password hashing.
- Implemented parameterized SQL queries and input validation.
- Used Wireshark to analyse network traffic and troubleshoot communication.

FPGA Environmental Monitoring System

- Programmed FPGA hardware to process real-time environmental sensor inputs.
- Configured OLED displays for live data visualization.
- Interfaced digital components to ensure reliable signal transmission.
- Validated system functionality through hardware testing and troubleshooting.

Robo Butterfly (Ornibot) – Team Lead

- Took over the lead in project planning, documentation, and work distribution.
- Designed and developed a robotic butterfly using Arduino, sensors, DC motors, embedded programming.
- Created CAD models and mechanical assemblies using SolidWorks.
- Optimized system performance through iterative testing and troubleshooting.

PROFESSIONAL EXPERIENCE

Cloud Computing Lab Assistant

April 2026 - Present

Humber Polytechnic

- Assisted in managing Linux and Windows servers used for academic cloud infrastructure.
- Configured virtual machines, user permissions, VPN access, and remote connectivity solutions.
- Supported deployment and maintenance of enterprise software across faculty systems.
- Investigated system issues through log analysis and troubleshooting.
- Worked with Git-based development workflows while supporting production and staging environments.

- Assisted with cloud infrastructure, virtualization, and secure access management.
- Collaborated with IT staff to improve system reliability and security.

Robotics Instructor - Code-it-Hacks

Jan 2026- June 2026

- Delivered hands-on instruction in robotics, programming, and engineering design.
- Demonstrated microcontroller, sensor, and actuator integration techniques.
- Mentored students through prototype construction and iterative improvement.
- Reinforced engineering concepts using practical laboratory activities.

IT and Admin Intern -World Kongers Organization

July 2025 - June 2026

- Supported administrative operations, technical documentation, and data management.
- Collaborated with cross-functional teams to coordinate events and maintain digital records.

Program Engagement Coordinator -Afghan Women's Organization

June 2025

- Led STEM activities and engineering workshops for youth.
- Promoted teamwork, problem-solving, and safe use of technical equipment.

LEADERSHIP EXPERIENCE

President - Humber Women in Engineering

March 2026

- Lead initiatives that encourage women to pursue careers in engineering and technology.
- Organize networking events, professional development workshops, and industry engagement opportunities.
- Collaborate with faculty, students, and industry professionals to strengthen the engineering community.

CERTIFICATION

- Google Cybersecurity Professional Certificate
 - Studied network security, firewalls, VPNs, IDS/IPS, and secure network architecture.
 - Applied the CIA Triad, authentication, encryption, risk management, and vulnerability assessment principles.
 - Learned OWASP Top 10, web application security, and cybersecurity best practices.
 - Used Wireshark to analyze network traffic and investigate suspicious activity.
 - Gained hands-on experience with Linux, SQL, SIEM concepts, threat detection, and incident response.
 - Developed foundational knowledge of ethical hacking, penetration testing, and security monitoring

TECHNICAL SKILLS

- Programming: Python, Java, C, SQL, JavaScript, HTML/CSS, VHDL
- Cybersecurity & Networking: Wireshark, TCP/IP, Network Troubleshooting, Cloud Computing
- Embedded & Engineering: Arduino, Raspberry Pi, FPGA, Embedded Systems, Circuit Design, Breadboarding, SolidWorks, AutoCAD
- Tools: Wireshark, Git, GitHub, VMware, VirtualBox, Oracle Linux, Azure, SSH, Tailscale, bash, PowerShell
- Professional: Technical Documentation, Hardware Troubleshooting, Research & Testing, Problem Solving, Team Collaboration, Leadership
